

While considering market needs and demands, **Megadyne** has developed a new product which can be used in various applications; especially in inclined-declined conveyor systems.

According to our market data; PVCCON 2R/12 PG28 00/P1 AS can be used in special applications, such as corrugated carton production for conveying left over carton pieces.

Because the top surface of the product was developed with the negative pyramid pattern, it allows smooth surface materials to be easily gripped and conveyed without sliding.

Also, the antistatic feature of the belt reduces dust and dirt.

Megadyne is pleased to inform you about our new product.

General Features

- Antistatic
- Negative Pyramid top surface pattern

Application Areas

- Inclined-Declined conveying
- Corrugated carton transport
