

Megadyne continuously carries on research and development of new products and markets.

Within the food sector, the agricultural market continues to expand. To broaden our range in these market segments, we have added a new belt type.

All of our products for the Food Industry are Phthalate-free and are therefore suitable for direct contact with food products.

Many belt types available in the market for agricultural applications are not suitable for direct food contact.

However, at Megadyne, we are aware that for agricultural applications all the components that are incorporated in the conveyor system should be fully compliant with FDA requirements.

We are introducing a new type: PVCCON 3R/16 AG42 P1/V10 AS FA, and it is included in our standard product range. This is a 3 ply PVC Apple Green belt with an inverted pyramid back and smooth top.

General Features

- FA (Food approved) meets FDA requirements (EU 10/2011)
- AS (Antistatic) reduces belt contamination
- Resistant to humid and wet environmental operating conditions

Application Areas

- Agricultural Applications
- Food Applications
