

MEGADYNE PLOTTER BELT

Megadyne is excited to announce the addition of replacement plotter carriage belts for Plotters machine to our already extensive line of custom and stock belting products.

These plotter carriage belts are manufactured out of high quality thermoset urethane (PU). PU offers a number of benefits over traditional rubber belts. Unlike rubber belts, thermoset urethane belts will not dry out, become brittle, crack, or dust-out over time due to bi-directional slewing.

Adding to the strength of the Megadyne belt is the Kevlar cord reinforcement. Kevlar cords give the belts strength and minimize stretch. The belts — designed with drive side teeth and ribs to improve mesh interface and tracking — are carefully molded to ensure precise tolerances and accurate fit.

“We are proud to offer our customers a line of direct OEM quality replacement plotter carriage belts.” said our Director of Sales, Rich Blais. “These plotter belts are made with the same high quality materials and with the same attention to detail as all of our products.”

Megadyne America manufactures five different plotter carriage belts in three different lengths: 24 inches, 36 inches, and 42 inches. Together, the belts are compatible with more than 15 different Plotter models.
